Claim Rejections - 35 USC § 112

Claims 7, 14, 21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims conflict with their base claims since the percentage of 0.5%, for example in claim 7, does not further limit the claim from which it depends, for example claim 6, which cites a range of 3.25-9.5%.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Cathey et al (US 5,391,259).

Cathey discloses an emitter array for a display device having a plurality of pixels, at least one emitter in each pixel having substantially a same height (col.7, lines 50-51, col.9, lines 7-9), for example in the range of 1.5 to 1.7 microns (col.7, lines 18-19), a material for each emitter comprising amorphous silicon (col.5, line 24). Since the heights are substantially identical, and formed by an masking and etching process as in the instant invention, they are expected to inherently have the same result, i.e., a range of sizes, for example 3.25-9.5% of each other.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-5, 10-12, 17-19, 24-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cathey et al(US 5,391,259).

The discussion of Cathey from above is repeated here. As to the range of sizes cited, for example in claims 3-4, Cathey discloses a range of 0.7-1.75 micron height, whereas the claims cite a more narrow range of 1.5 to about 1.7, and a height of 1.6 microns. It would have been obvious to one with ordinary skill in the height to choose the cited heights from the range disclosed by Cathey in order to vary the yield of the filed emission display device according to the shape and height of the emitter tips.

Applicant is advised that should claims 1-7 be found allowable, claims 8-14 will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).
